LDR Couples App — Product Requirements Document

Version: 1.0
Status: MVP — Product Definition
Product: LDR Couples App
Core concept: A daily complementary Hunt Card experience that turns two separate days into shared memories inside a scrapbook they build together.

---

1. Product Overview

The app is a private shared experience for couples, initially designed for long-distance relationships.

Every day, each partner receives a **Hunt Card**.

Each partner's card contains a prompt that complements the other partner's prompt.

Example:

Your Card

> Find something from your morning.

Your Partner's Card

> Find something from your evening.

Each person goes through their own day, finds something that matches their card, and photographs it.

Their photo is placed on the **back of their Hunt Card**.

The cards remain closed until both partners have completed their Hunts.

When both are ready, the couple enters the **Reveal** experience.

They press/open their cards and both cards flip over, revealing the photographs simultaneously.

After the reveal, the couple can react to the memories and choose:

> **Add to Our Story**

The two photos then become a new page in the couple's shared **scrapbook archive**.

Completing Hunts earns **Points** and **Coins**.

Coins can be used to decorate and personalize the scrapbook.

---

2. Product Vision

> **Turn your separate days into a shared story.**

The product should feel like a small daily ritual rather than another messaging or relationship-management app.

It should be:

- Warm
- Playful
- Intimate
- Nostalgic
- Personal
- Collectible
- Lightweight

The experience should feel like opening a little card from your partner rather than completing an assignment.

---

3. Core Product Philosophy

The product is built around three behaviors:

NOTICE

The Hunt gives each person a reason to notice something in their real day.

REVEAL

The couple discovers how their separate days looked through the card-flip reveal.

REMEMBER

The couple chooses to preserve the moment in their shared scrapbook.

Core loop

HUNT → CAPTURE → SUBMIT → REVEAL → REACT → ADD TO OUR STORY → DECORATE → RETURN

---

4. Target User

Primary

Long-distance couples who want to feel more involved in each other's everyday lives.

Examples:

- Couples living in different cities
- Couples living in different countries
- Students living away from their partner
- Couples separated by work
- Military couples
- Couples temporarily living apart

Secondary

Couples who live together but want a playful daily ritual.

The MVP should primarily communicate toward LDR couples.

---

5. Core User Problem

Messaging apps make it easy for couples to send each other photos.

But they don't necessarily give couples a reason to **notice and capture small moments** from their day.

The product creates that reason.

Instead of:

> "Send me a photo."

The product asks:

> "Go find something."

The couple then gets to discover **two different perspectives from two separate lives**.

---

6. MVP Navigation

The primary navigation consists of:

TODAY

Today's Hunt Cards and daily activity.

OUR STORY

The shared scrapbook and memory archive.

US

Couple profile, settings, subscription, notifications, and relationship controls.

There is no traditional calendar as a primary feature.

Our Story replaces the conventional calendar.

---

7. Account & Couple Creation

7.1 Welcome

The opening screen communicates the product concept.

> **Turn your separate days into a shared story.**

CTA:

Get Started

Secondary:

I already have an account

7.2 Account Creation

Supported authentication:

- Email
- Apple
- Google

The final authentication provider can be selected during technical implementation.

7.3 Create Couple

The first user enters:

- Their name
- Partner's name
- Optional relationship nickname

Example:

> Kurt + Sarah

The system creates a private Couple.

7.4 Invite Partner

The first user receives a unique invitation link/code.

CTA:

> **Invite your person ❤️**

The partner follows the invitation and joins the Couple.

The Couple becomes active once both partners are connected.

---

8. Onboarding

After both partners join:

> **You're officially hunting together.**

Brief explanation:

> Every day, you'll each receive a Hunt Card.
>
> Your cards are connected—but you won't see each other's until it's time to reveal.

CTA:

Open Your First Card

The first Hunt should be available immediately.

Avoid a long tutorial.

---

9. TODAY Screen

TODAY is the primary home screen.

Example:

> **Good morning, Sarah ❤️**
>
> **Today's Hunt**

The main content is the user's Hunt Card.

---

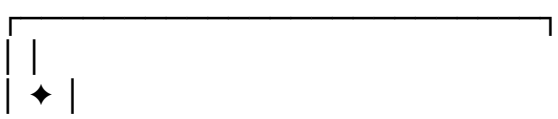

10. Hunt Cards

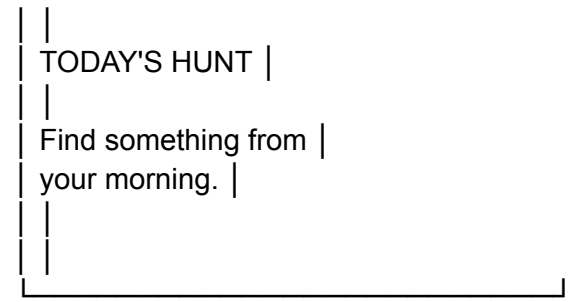

The Hunt Card is a core product mechanic, not merely a visual component.

Each Hunt is represented as a physical-card-inspired digital object.

The card contains the user's Hunt prompt on its front.

Example:

The card should feel tactile and collectible.

---

11. Complementary Hunt Cards

Each partner receives a different prompt that complements the other.

The prompts should create a relationship between the two photographs without requiring them to photograph the same thing.

Example 1

Partner A

> Find something from your morning.

Partner B

> Find something from your evening.

Example 2

Partner A

> Find something that reminded you of me.

Partner B

> Find something you think I'd like.

Example 3

Partner A

Find something that made you smile today.

Partner B

Find something you wish I could have seen.

Example 4

Partner A

Find something beautiful.

Partner B

Find something ordinary that you enjoyed.

Example 5

Partner A

Find something you ate today.

Partner B

Find something you wish you could have shared with me.

---

12. Hunt Design Principle

The objective is not to create identical photographs.

The objective is to create **complementary perspectives**.

The reveal should make the couple think:

"That's what you saw today."

The two photographs become more meaningful when viewed together.

---

13. Hunt Modes

The user can choose how many Hunt Cards they want each day:

1 Hunt

Easy

3 Hunts

Regular

5 Hunts

Challenge

Default:

1 Hunt

The number of available Hunts can be adjusted by subscription status.

---

14. Hunt Categories

Initial categories:

- **Notice**
- **Funny**
- **Everyday**
- **Us**
- **Beautiful**
- **Random**

The system should balance categories to prevent repetitive experiences.

---

15. Hunt Database

V1 should use a curated Hunt database.

AI-generated prompts are not required for MVP.

Each prompt should contain:

- Prompt ID

- Prompt text
- Category
- Complementary prompt ID
- Difficulty
- Active/inactive status
- Optional illustration
- Repeat-prevention metadata

The backend selects complementary pairs.

---

16. Hunt Repetition

The same exact Hunt pair should not appear repeatedly.

Initial rule:

> **Do not repeat an exact complementary Hunt pair for the same couple within 30 days.**

The repeat window should be configurable by the backend.

Prompt history should be stored per Couple.

---

17. Opening the Hunt Card

When the user enters TODAY, their card is closed.

They can see their own prompt.

They cannot see their partner's card.

The card may have a small visual indicator:

> **Your Hunt**

The partner's Hunt remains private.

---

18. Starting the Hunt

CTA:

Start Hunt

After tapping:

> **Go find it.** 📸

The user can:

- Take a photo
- Choose a photo from their camera roll

The user should be encouraged to capture something from their real day.

---

19. Capturing the Hunt

The user photographs something that matches the prompt.

Example:

> Find something from your morning.

They photograph their morning coffee.

The photograph becomes the hidden memory associated with the Hunt Card.

---

20. Photo Preview

After taking/selecting the image:

> **Happy with your find?**

Actions:

Submit

Retake

The user can review their photograph before submission.

---

21. Submitting the Card

Once submitted, the photograph is attached to the **back of the user's Hunt Card**.

The card becomes locked.

Visual state:

> 🔒 **Card Locked**

The partner cannot see the photograph yet.

The user can see their own card and photo if desired, but the partner's card remains closed.

---

22. Waiting State

After submitting:

> **Your card is locked.**
>
> Waiting for your person...

Optional playful text:

> **Don't peek** 👀

The waiting state should be calm and not guilt-inducing.

Avoid language such as:

> "Your partner is taking too long."

---

23. Partner Completion

When both partners have submitted:

The system marks the Hunt:

> **READY TO REVEAL**

Both users receive a notification.

Example:

> **Your Hunt is ready to reveal 👀**

---

24. REVEAL EXPERIENCE

The Reveal is one of the most important interactions in the app.

The two closed Hunt Cards are presented together.

Example:

YOUR CARD

> Find something from your morning.

THEIR CARD

> Find something from your evening.

Then:

> **Are you ready to open?**

CTA:

OPEN

---

25. Card Flip Interaction

When the user presses **OPEN**, both cards flip.

The animation should resemble turning over a physical card.

FRONT

Contains the Hunt prompt.

BACK

Contains the photograph captured for that Hunt.

The two cards flip together so the photographs are revealed at approximately the same moment.

---

26. Reveal Layout

After the flip:

YOUR FIND

📸 Your photograph

THEIR FIND

📸 Partner's photograph

The cards remain visually connected.

The couple should immediately be able to compare their two moments.

The experience should feel like:

> **"This is what I found. What did you find?"**

---

27. Reveal Animation

The reveal should feel rewarding without becoming slow or gimmicky.

Suggested sequence:

1. Closed cards appear.
2. User sees the two prompts.
3. User taps **OPEN**.
4. Both cards flip simultaneously.
5. Photos are revealed.
6. Small celebratory animation.
7. Reaction controls appear.
8. Continue CTA appears.

The animation should be skippable or shortened for repeat users if necessary.

---

28. Reactions

After revealing, users can react to their partner's photo.

Initial reactions:

- ❤️
- 😍
- 😂
- 🥹
- 👀

Optional short comment:

> "I knew you'd take a picture of that 😂"

Comments should be lightweight.

The product is not intended to become a full messaging app.

---

29. Add to Our Story

After the reveal, the primary next action is:

Add to Our Story

This is a deliberate action.
The app does not automatically save any reveal as a permanent scrapbook page. Saving is always a choice the user makes.

The user is effectively saying:
Let's keep this memory.

What is automatic is the page *design*, not the decision to save.
When the user taps Add to Our Story, the app instantly composes a finished, decorated scrapbook page. The user is never handed a blank page to build.

Principle:
The decision is deliberate. The result is effortless.

---

30. Adding a Memory to Our Story

When the user taps Add to Our Story:

The app selects a template and automatically composes the two photographs into a finished scrapbook page.

Template selection:

● A smart default template is chosen automatically (varied across pages, and may reflect the Hunt category or season).

● The user can change the template with a single tap.

● The user can freely edit the page afterward — reposition photos, add stickers, adjust decorations — but no editing is required.

Possible animation:

Cards → photographs → composed scrapbook page

The new page contains:

● Date

● Both photographs (auto-placed into the template's photo slots)

● Hunt prompts

● Optional reactions

● Optional comments

● Template background, frames, and decorative elements

Photo handling:

Photo slots accommodate different photo orientations (portrait and landscape) with sensible auto-fit, so auto-composed pages always look intentional.

Confirmation:

Added to Our Story ✨

Design intent:

Every saved memory looks good by default. Editing is an optional enhancement, not a requirement. This keeps the scrapbook beautiful even for couples who never manually decorate.

---

31. OUR STORY — Shared Scrapbook

Our Story is the emotional center of the product.

It replaces the conventional calendar.

It should not feel like a database of photos.

It should feel like a **shared scrapbook that the couple is building together.**

---

32. Scrapbook Visual Direction

The visual language should feel:

- Warm
- Nostalgic
- Playful
- Handmade
- Intimate
- Slightly imperfect
- Personal

Visual inspiration:

- Polaroids
- Paper
- Tape
- Stickers
- Doodles
- Handwritten details
- Layered photos

- Scrapbook backgrounds
- Small illustrations

The design should feel like a digital memory book rather than a standard mobile photo gallery.

---

33. Scrapbook Page

Each saved Hunt creates a memory page.

Example:

SEPTEMBER 18

> **Find something from your morning.**

📸 YOUR FIND

📸 THEIR FIND

Small reactions/comments can appear beneath the photos.

Decorations can be placed around the photographs.

---

34. Scrapbook Growth

The scrapbook becomes more valuable with time.

Day 1

One shared memory.

Day 30

Thirty days of memories.

Day 100

A substantial visual history.

Day 365

An entire year of their separate lives captured together.

The app should make this accumulation visible.

Example:

> **OUR STORY**
>
> 47 days
> 83 moments
> 214 photos

---

35. Scrapbook Customization

Couples can personalize their scrapbook using templates and decorations.

Possible categories:

Templates

- Classic
- Love Letter
- Sunday Morning
- Midnight
- Summer
- Autumn

A template defines a page's overall design — background, frames, photo-slot arrangement, and decorative accents. A smart default is applied automatically to every new memory (see §30); couples can swap templates with a single tap and unlock additional templates over time.

Frames

- Polaroid

- Film
- Rounded
- Tape

Stickers

- Hearts
- Flowers
- Stars
- Animals
- Food
- Doodles
- Funny stickers
- Seasonal stickers

Backgrounds

- Paper
- Notebook
- Kraft
- Vintage
- Pastel
- Seasonal

Decorative Elements

- Washi tape
- Date stamps
- Labels

● Handwritten notes

● Small illustrations

Templates provide the page's baseline design; frames, stickers, backgrounds, and decorative elements let couples customize further on top of it.

---

36. Decoration Assets

Use a hybrid asset system.

SVG

Use primarily for:

- Stickers
- Doodles
- Icons
- Frames
- Illustrations
- Decorative vectors

PNG/WebP

Use for:

- Paper textures
- Detailed artwork
- Raster decorative textures

JPEG/WebP

Use for:

- User photographs

The scrapbook renderer should support layered positioning of these assets.

---

37. Shared Scrapbook State

The scrapbook belongs to the Couple.

Both partners see the same scrapbook.

If one partner adds a sticker, the other partner should see the updated scrapbook.

Decoration changes should persist.

---

38. Coins

Coins are the app's **personalization currency**.

They are not required to participate in the core Hunt experience.

Users earn Coins through activity.

Initial reward:

> **10 Coins per submitted Hunt photo**

Therefore:

1 Hunt

10 Coins

3 Hunts

30 Coins

5 Hunts

50 Coins

The economy should remain configurable.

---

39. Points

Points are completely separate from Coins.

Points = progress

Coins = personalization

Points can represent:

- Hunt completion
- Daily completion
- Milestones
- Achievements
- Progress levels

Example:

Complete a Hunt: +10 Points

Complete the day's selected Hunts: +25 Points

Exact values should remain configurable.

---

40. Shared Coin Wallet

Coins should belong to the Couple rather than to individual users.

Example:

> **Our Coins 🪙 620**

Both partners can earn Coins.

Both partners can spend Coins.

This makes decoration a collaborative activity.

The system should record:

- Who earned Coins
- Amount
- Reason
- Who spent Coins
- Item purchased
- Date/time

---

41. Coin Shop

The Coin Shop is primarily a scrapbook customization store.

Example:

TEMPLATES
Classic — Free
Love Letter — 150 Coins
Sunday Morning — 200 Coins
Midnight — 250 Coins

STICKERS
Heart — 30 Coins
Flowers — 50 Coins
Stars — 50 Coins

FRAMES
Polaroid — 75 Coins
Vintage Film — 100 Coins

THEMES
A theme is a coordinated bundle — a template paired with matching frames, stickers, and backgrounds.
Vintage Paper — 150 Coins
Date Night — 200 Coins
Cozy Autumn — 300 Coins

A starter set of templates, stickers, and frames is free so every couple can build attractive pages from day one. Premium templates, individual decorations, and full themes are unlocked with Coins.

Prices must be configurable.

---

42. Purchased Coins

Users may purchase additional Coins.

Potential packages:

- Small
- Medium
- Large
- Extra Large

Coin purchases should be optional.

The core Hunt experience should not require purchased Coins.

---

43. Monetization Philosophy

The user should never feel:

> "I have to pay to participate in my relationship."

Instead:

> **The subscription keeps the shared story going.**

And:

> **Coins let you make that story yours.**

Subscription and Coins are therefore separate monetization layers.

---

44. Subscription

Initial business model:

14-Day Full-Access Trial → Subscription

During the trial, the couple should experience the complete product.

Trial access includes:

- Hunts
- Complementary Hunt Cards
- 1/3/5 Hunt modes
- Photo capture
- Hidden submissions
- Card-flip reveal
- Reactions
- Points
- Coins
- Our Story
- Scrapbook customization

- Included premium scrapbook content

---

45. Trial Conversion

On Day 14, instead of simply displaying:

> Trial ended.

Show the accumulated value.

Example:

YOUR FIRST 14 DAYS ❤️

14 days together

26 moments created

52 photos shared

13 days completed

620 Coins earned

Then:

> **Keep building your story.**

CTA:

Continue Together

---

46. Subscription Structure

One subscription covers both partners.

Initial pricing hypothesis:

$5.99/month per couple

$49.99/year per couple

Pricing should remain configurable.

The app should never require two separate subscriptions for one Couple.

---

47. Non-Subscriber State

If the couple does not subscribe:

Existing memories should remain safe.

The scrapbook should not simply disappear.

The product should communicate:

> **Your story is safe.** ❤️
>
> Want to keep adding to it?

Premium functionality can become restricted according to the final monetization strategy.

The exact post-trial restrictions should be implemented as configurable entitlements rather than hard-coded assumptions.

---

48. Streaks

A streak represents consistent shared participation.

A day counts toward the streak when both partners complete their required Hunt activity.

Example:

> 🔥 **12 Day Streak**

Streaks should be forgiving.

Potential V1 mechanisms:

- Grace day
- Streak freeze
- Vacation mode
- Time-zone flexibility

Avoid creating unnecessary relationship pressure.

---

49. Notifications

Initial notifications:

New Hunt

> **Your Hunt is waiting 👀**

Partner Submitted

> **Your person finished their Hunt.**

Reveal Ready

> **Your cards are ready to open. ❤️**

Streak Reminder

> **Your streak is waiting for you.**

Notification timing should account for each user's timezone.

Users should be able to control notification preferences.

---

50. Time Zones & Hunt Lifecycle

Each user has their own timezone.

The system must support couples in different countries.

Daily Hunt availability should not require both users to be online simultaneously.

The backend should determine each user's daily availability while maintaining one shared Hunt cycle for the Couple.

---

51. Missed Hunt

A Hunt where only one partner has submitted is not lost and does not create pressure. It moves to a dedicated Missed Hunts area, where it waits to be completed.

The same Hunt is framed differently for each partner:

For the partner who did not submit:
You missed!
(with the option to complete the Hunt now)

For the partner who did submit:
Waiting for [Name] to complete this Hunt.

The missing partner may complete a missed Hunt at any time, with no deadline. Once they submit, the Hunt becomes ready to reveal and proceeds normally.

Missed Hunts must never use guilt-inducing language. Avoid "Your partner is waiting for you" or "Don't break their streak." The tone is a gentle open invitation, not a reminder of failure.

If both partners miss a Hunt, it is discarded silently and never appears in Missed Hunts (see §50).

---

52. End Relationship

Either partner can choose:

> **End Relationship**

Confirmation:

> **Are you sure you want to end your shared story?**

Explain:

> Your memories won't automatically be deleted.

Available actions:

Archive Our Story

The shared scrapbook becomes read-only.

Export My Memories

The user can preserve their memories.

Start Fresh

The user leaves the current Couple and can establish another relationship later.

Delete My Copy

The user can delete their personal copy according to the final privacy/data-retention implementation.

Ending the relationship does not require the other partner's approval.

---

53. Archived Relationship

After a relationship is ended:

- New Hunts stop
- New shared memories stop
- Shared streak stops
- Shared Coin spending stops
- Couple notifications stop
- Scrapbook becomes read-only

The user can continue accessing their preserved memories according to the final privacy policy.

The experience should not use overly sentimental breakup language.

---

54. Privacy

The Couple is private by default.

There is no public social graph.

No:

- Public profiles
- Public scrapbook
- Public photo feed
- Followers
- Discoverability
- Matching

Photos are private to the intended Couple unless explicitly exported/shared by the user.

---

55. V1 Features Included

Core Hunt

- Account creation
- Couple creation
- Partner invitation
- Daily Hunt Cards
- Complementary prompts
- 1/3/5 Hunt modes
- Photo capture
- Camera-roll upload
- Hidden submissions
- Waiting state
- Card locking
- Card-flip reveal
- Side-by-side photo comparison
- Reactions
- Optional comments
- Add to Our Story

Memory

- Our Story
- Scrapbook pages
- Scrapbook customization
- Shared decorations
- Shared Coin wallet

Gamification

- Points
- Coins
- Streaks

Monetization

- 14-day trial
- Subscription
- Coin purchases

Relationship

- Notifications
- Time-zone support
- End Relationship
- Memory preservation

---

56. V1 Features Excluded

Do not expand the MVP into an all-purpose couples super-app.

Exclude:

- Chat
- Video calls
- AI relationship therapist
- Mood tracking
- Public social feed
- Matching
- Location tracking
- Large mini-game library
- Bucket lists
- Gifts
- Complex widgets
- Virtual pets
- Marketplace
- Physical gift delivery
- Large relationship quiz library
- Traditional calendar
- Excessive sticker complexity

These can be evaluated after the core loop is proven.

---

57. Future Features

Potential future additions:

Picture of the Day

No prompt.

> **Show me something from your day.**

For My Person

A user can capture a photo during the day and save it specifically for their partner.

On This Day

> **One year ago today...**

The app surfaces a previous memory.

Monthly Recaps

Automatically create a scrapbook-style recap.

Yearly Recap

> **Your Year Together**

A visual compilation of the couple's memories.

Custom Hunts

Couples can create their own complementary Hunt pairs.

Special Hunt Packs

Examples:

- Date Night
- Valentine's
- Christmas
- Anniversary

- Travel
- Long Distance
- Just Because

Exportable Photo Book

Allow users to turn their digital scrapbook into a printable memory book.

---

58. Future Shared World

The scrapbook may eventually evolve into a larger shared digital space.

Possible direction:

> **Our Little World**

Photos, memories, decorations, achievements, and relationship milestones could eventually exist inside a customizable shared environment.

This is NOT part of V1.

The scrapbook is the foundation.

---

59. Core Data Model

User

- id
- name
- email/auth provider
- timezone
- notification settings
- subscription status

Couple

- id
- partner_a_id

- partner_b_id
- created_at
- relationship_status
- streak
- coin_balance
- points

Hunt

- id
- couple_id
- date
- pair_id
- partner_a_prompt
- partner_b_prompt
- status

Submission

- id
- hunt_id
- user_id
- photo_url
- submitted_at

Reveal

- id
- hunt_id
- revealed_at

Memory

- id
- couple_id
- hunt_id
- date
- photos
- reactions
- comments

ScrapbookPage

- id
- couple_id

- memory_id
- created_at

ScrapbookItem

- id
- scrapbook_page_id
- asset_id
- position
- rotation
- scale
- created_by

CoinTransaction

- id
- couple_id
- user_id
- amount
- transaction_type
- reference_id
- timestamp

PointTransaction

- id
- couple_id
- user_id
- amount
- reason
- timestamp

The conceptual data model below has been superseded by the database schema document (*Database Schema & Transaction Model*), which is the single source of truth for all data structures.

Notable differences from earlier drafts of this section:
● Reveal is not a separate entity — a reveal is represented by fields on the Hunt (one Hunt has exactly one reveal).
● ScrapbookItem is not a separate entity — scrapbook decorations are stored as a JSON layout on the scrapbook page (single-editor design).
● PointTransaction is deferred to post-MVP (see §39).
● Memories are thin records that reference a Hunt; both photographs are reached through the Hunt's submissions.
● Reactions and comments attach to individual submissions (photos), not to the Hunt or memory as a whole.

Refer to the schema document for the authoritative list of tables, columns, and relationships.

---

60. Important Business Rules

1. A Couple contains two partners.
2. Each Hunt belongs to one Couple.
3. Each Hunt contains complementary prompts.
4. Each partner sees only their own prompt before Reveal.
5. A submitted photograph is hidden from the partner.
6. Each partner's photo is attached to the back of their Hunt Card.
7. A Hunt cannot be revealed until both partners have submitted.
8. Both cards flip during the Reveal.
9. Both photos become visible after the flip.
10. Users can react after Reveal.
11. Users can choose to Add to Our Story.
12. Adding to Our Story creates a scrapbook memory.
13. Each eligible submitted photo earns Coins.
14. Points and Coins are separate systems.
15. Coins belong to the Couple.
16. Scrapbook decorations are purchased with Coins.
17. Purchased Coins can be added to the shared Coin wallet according to the final purchase architecture.
18. Existing memories are not automatically deleted when a subscription expires.
19. Either partner can end the relationship.
20. Ending the relationship stops new shared activity.
21. Archived scrapbook content becomes read-only.
22. Prompt repetition must be controlled.
23. Partner time zones must be supported.
24. One Couple subscription covers both partners.

---

61. Analytics

Track the complete Hunt funnel.

Acquisition

- Account created

- Couple created
- Partner invited
- Partner joined

Activation

- First card opened
- First Hunt started
- First photo captured
- First photo submitted
- First Hunt completed
- First Reveal
- First reaction
- First memory added to Our Story

Engagement

- Hunts completed/day
- Photos submitted/day
- Reveal rate
- Partner synchronization rate
- Average Hunt count
- Streak length
- Our Story visits
- Decorations purchased
- Coins earned
- Coins spent

Monetization

- Trial started
- Day 1 active
- Day 7 active
- Day 14 active
- Subscription started
- Subscription cancelled
- Coin purchase
- Revenue per Couple

Retention

Track:

- Day 1
- Day 7

- Day 14
- Day 30
- Day 60
- Day 90

---

62. Core Success Metric

The primary product metric should be:

Weekly Shared Memories

Number of completed complementary Hunt pairs per active Couple per week.

This measures whether the central experience is actually happening.

Secondary metrics:

- Couple retention
- Hunt completion
- Reveal rate
- Scrapbook return rate
- Trial-to-paid conversion
- Coin engagement
- Decoration engagement

---

63. Acceptance Criteria — Hunt Card

A Hunt Card must:

1. Display the user's assigned prompt.
2. Keep the partner's prompt private.
3. Allow the user to begin the Hunt.
4. Allow photo capture/upload.
5. Allow photo review.
6. Allow submission.
7. Attach the submitted photo to the back of the card.
8. Lock the card after submission.
9. Prevent the partner from seeing the photo before Reveal.
10. Remain in a waiting state until both partners submit.

---

64. Acceptance Criteria — Reveal

A Reveal must:

1. Remain unavailable until both partners submit.
2. Display both closed Hunt Cards.
3. Display each user's respective prompt.
4. Display an **Are you ready to open?** interaction.
5. Allow the user to initiate the Reveal.
6. Flip both cards simultaneously.
7. Display the photograph on the back of each card.
8. Make both photographs visible together.
9. Allow reactions.
10. Allow an optional comment.
11. Provide **Add to Our Story**.

---

65. Acceptance Criteria — Our Story

Our Story must:

1. Display saved memories chronologically.
2. Display both photographs.
3. Display the corresponding Hunt prompts.
4. Create a scrapbook-style page for each saved memory.
5. Support decorative assets.
6. Allow shared scrapbook customization.
7. Persist decoration placement.
8. Synchronize changes between partners.
9. Display accumulated memories over time.
10. Support read-only archived mode after relationship termination.

---

66. Acceptance Criteria — Coins

The Coin system must:

1. Award Coins for eligible submitted Hunt photos.
2. Maintain a shared Couple balance.
3. Record every Coin transaction.
4. Prevent negative balances.
5. Deduct Coins when decorations are purchased.

6. Unlock purchased decorations.
7. Allow both partners to spend shared Coins.
8. Support purchased Coins.
9. Safely handle failed transactions.

---

67. Acceptance Criteria — Subscription

The subscription system must:

1. Start the eligible 14-day trial.
2. Provide full access during the trial.
3. Display trial status.
4. Provide appropriate expiration reminders.
5. Allow subscription purchase.
6. Grant subscription access to both partners.
7. Handle cancellation.
8. Preserve existing memories.
9. Restrict premium entitlements after expiration according to the configured policy.
10. Keep subscription state synchronized between partners.

69. Design Direction

The key design metaphor is:

> **A scrapbook that happens to be an app.**

Not:

> An app pretending to be a scrapbook.

The Hunt Cards should feel like small physical cards.

The Reveal should feel like turning over a real card.

The photos should feel like memories being physically placed into an album.

The scrapbook should gradually become more personal as the Couple uses the app.

---

70. Visual Personality

Colors

Warm and soft rather than aggressively romantic.

Possible direction:

- Cream
- Paper
- Warm white
- Muted pastels
- Soft reds
- Gentle greens
- Occasional brighter accent colors

Avoid making the entire product pink.

Typography

Combination of:

- Friendly modern UI font
- Occasional handwritten/decorative type for scrapbook elements

Handwritten typography should be used selectively rather than for all interface text.

Photography

User photographs are the visual centerpiece.

The app's decoration should frame and enhance them rather than overpower them.

Motion

Important animations:

- Card opening
- Card flip
- Photo reveal
- Card-to-scrapbook transition
- Coin reward

- Decoration placement

Motion should feel tactile and satisfying.

---

71. Core Product Loop

The final MVP experience is:

1. HUNT

Receive a Hunt Card.

2. NOTICE

Go through your day looking for something.

3. CAPTURE

Photograph your find.

4. SUBMIT

Place the photo on the back of your card.

5. WAIT

Your card stays closed.

6. REVEAL

Both partners open their cards.

7. DISCOVER

See the two separate moments side-by-side.

8. REACT

Respond to your partner's moment.

9. ADD TO OUR STORY

Turn the reveal into a permanent scrapbook memory.

10. EARN

Receive Points and Coins.

11. DECORATE

Spend Coins making the scrapbook yours.

12. RETURN

Come back tomorrow for another Hunt.

---

72. Product Definition

The MVP can ultimately be described in one sentence:

> **A daily complementary photo Hunt where couples flip their cards to reveal each other's moments, then build those memories together in a shared digital scrapbook.**

---

73. North Star

The product should never lose sight of this:

> **We don't give couples more things to do. We give them one tiny reason to notice each other's lives.**

The **Hunt Card** creates the reason.

The **photo** captures the moment.

The **flip** creates anticipation.

The **Reveal** creates the connection.

Our Story preserves it.

Coins let the couple make it theirs.

And over time, the scrapbook becomes a visual record of their life together—even when their lives happen in different places.

Here are the five PRD sections, revised to match the schema. Each is written in your PRD's voice as a drop-in replacement. Paste over the existing section.

---

§22. Waiting State

After submitting, the user's card is locked and waits for their partner.

Your card is locked.
Waiting for your person...

Optional playful text:
Don't peek 👀

The waiting state is calm and never guilt-inducing. There is no countdown and no deadline pressure. Avoid language such as "Your partner is taking too long."

A Hunt has no hard expiry. Once both partners have submitted — whether minutes or days apart — it becomes ready to reveal. A Hunt where only one partner has submitted moves to Missed Hunts (see §51) rather than expiring or being lost.

---

§39. Points → DEFERRED (Post-MVP)

Points are not part of the MVP.

The MVP tracks progress implicitly through the growing scrapbook (Our Story) and the streak counter. A dedicated Points system — representing achievements, milestones, and progress levels separate from Coins — is deferred to a future release.

When introduced, Points will follow the principle: Points = progress, Coins = personalization. Points are earned and never spent. Coins remain the only currency in the MVP.

---

§48. Streaks

A streak represents consistent shared participation. A day counts toward the streak when both partners complete their Hunt activity for that day.

Example:
🔥 12 Day Streak

Streaks are a gentle, encouraging signal — never a pressure mechanic.

The product must not use the streak to create anxiety or obligation. Specifically:
- No warnings about losing a streak.
- No "don't break your streak" messaging.
- No notifications that pressure a partner to act to protect a streak.

If a day is missed, the streak resets quietly, with no alarm or penalty. A longest-streak value is kept as a positive keepsake ("your best: 40 days"), never as something the user is warned they are about to lose.

This is a chill product. The streak exists to celebrate rhythm when it happens, not to manufacture urgency. Time-zone differences are accommodated so that a shared day is judged fairly across both partners' local times.

---

§50. Time Zones & Hunt Lifecycle

Each user has their own time zone. The system must support couples in different countries. Daily Hunt availability must not require both users to be online at the same time.

The backend maintains one shared Hunt cycle per Couple while allowing each partner to act on their own local day. Each daily Hunt has a generous shared window rather than a strict same-clock deadline, so that both partners get a full local day to participate regardless of the offset between them.

Hunt lifecycle:

1. Generated — the daily Hunt(s) are created for the Couple. A Couple receives 1, 3, or 5 Hunts per day according to their selected mode.
2. Open — waiting on submissions. The window is generous and does not hard-expire.
3. One submitted — if only one partner has submitted, the Hunt moves to Missed Hunts (see §51). It does not expire; the missing partner may complete it later with no time limit.
4. Both submitted — the Hunt becomes ready to reveal.
5. Revealed — both partners have opened the reveal and can see both photographs.
6. Added — the couple has chosen to save it to Our Story (see §29).

Both-missed handling:
If neither partner submits for a given Hunt, that Hunt is quietly discarded and never shown. There is no record and no guilt.

Incomplete Hunts never block new ones:
New daily Hunts continue to be generated regardless of any incomplete or missed Hunts. Missed Hunts accumulate harmlessly in their own area (see §51).

Deletion:
Either partner may delete an unrevealed (missed) Hunt, which removes it entirely. Revealed Hunts and saved memories cannot be deleted in the MVP.

Vacation Mode:
Either partner may enable Vacation Mode, which pauses new Hunt generation for the Couple until it is turned off. Existing memories and data are unaffected.
